

Professional summary:

Experienced BI Developer with 7+ years of experience delivering data-driven insights across acquisition, retention, funnel performance, and campaign ROI. Strong expertise in SQL, Tableau, Power BI, and cloud data platforms including fabric administration, with hands-on experience analyzing digital marketing, customer behavior, and experimentation data. Proven ability to partner with Marketing, Growth, and Product teams to translate complex datasets into clear dashboards, actionable KPIs, and optimization recommendations that improve engagement, conversion, and revenue performance.

Education:

Bachelor of technology in Computer Science Engineering.

Aug 2014 - April 2018

Qis College, Ongole, AP (India)

Professional experience:

Pharma Medica Research Inc., Mississauga, Ontario

Role: Data Engineer

July 2025 – Present

Responsibilities:

- Led Microsoft Fabric implementation and administration for enterprise clinical trial data platform, supporting Lakehouse, Warehouse, Data Pipelines, Semantic Models, and Power BI workloads.
- Built from scratch and operated Microsoft Fabric clinical trial data platform in production environment.
- Migrated on-prem SSMS-based clinical trial systems and legacy SSRS/SQL reports to Microsoft Fabric Lakehouse, Warehouse, and Power BI, enabling secure cloud-native analytics and reporting.
- Developed HR and training analytics dashboards covering employee lifecycle metrics, applying structured UI/UX design principles to ensure clarity and executive-friendly visualization
- Designed end-to-end Microsoft Fabric architecture integrating One Lake, Lakehouse, Warehouse, Pipelines, and Power BI with enterprise data governance and standards.
- Designed and developed Paginated Reports using Microsoft Power BI Report Builder and SSRS to support CRO operational, regulatory, and clinical reporting requirements
- Created data modeling standards using Snowflake schema and reusable SQL transformation patterns for CRO datasets.
- Designed and maintained enterprise Power BI semantic models with standardized KPI definitions, ensuring consistent business logic and eliminating metric duplication across reporting layers.
- Utilized Power Query in Microsoft Fabric and Power BI data flows to perform scalable data transformations and standardize enterprise clinical datasets using Python scripts for analytics and reporting.
- Built and managed Bronze, Silver, and Gold layers in Microsoft Fabric using incremental and CDC-style ingestion with Databricks, Azure Data Factory, SSIS, and Fabric Pipelines.
- Implemented incremental refresh and model optimization strategies to efficiently handle large-scale clinical datasets within Microsoft Fabric.
- Implemented clinical data validation framework including LDL/HDL checks and reconciliation rules for data integrity.
- Implemented RBAC, Row-Level Security, encryption, and sensitivity labeling across Microsoft Fabric and Power BI to ensure secure handling of HIPAA-regulated clinical trial data.
- Contributed to Microsoft Fabric tenant governance including workspace strategy, capacity management (F-SKU), monitoring, and access control.
- Enabled Copilot in Power BI for NL access to clinical and financial KPIs through governed semantic models.
- Developed optimized Power BI semantic models with advanced DAX and created reusable Power BI report templates aligned with standardized KPI definitions to ensure consistency across reporting.
- Acted as Data Steward for clinical datasets, defining ownership, refresh standards, and implementing data quality controls with automated alerts and issue resolution.
- Implemented CI/CD pipelines for Microsoft Fabric and Power BI using Azure DevOps for automated and controlled deployments across environments.
- Enabled end-to-end lifecycle ownership from design to production deployment of Microsoft Fabric architecture.
- Automated report validation, recurring data processes, reducing manual effort using Python by approximately 24 hr per week.
- Worked with operations and IT stakeholders to support production incidents, UAT, SaaS dashboards, and near real-time clinical trial reporting.

Manulife, Toronto, ON

Role: BI Developer

Jan 2025 – July 2025

Responsibilities:

- Led the consolidation of multiple dashboards and reports into a single, unified reporting system using Power BI and Azure Synapse Analytics, Data Bricks improving data accessibility and decision-making efficiency for key stakeholders.
- Designed and optimized complex data transformations using Azure Data Factory Mapping Data Flows and Data Bricks notebooks ensuring seamless data integration with Azure Synapse Analytics and other data sources.
- Developed and optimized advanced DAX measures and calculated columns using CALCULATE, context transition, and time intelligence to support complex KPIs and improve analytical performance.
- Engineered and executed data security protocols, including data encryption and masking, across Azure Synapse, Data Bricks storage layers and other databases to protect sensitive information.
- Enabled governed self-service analytics by integrating Power Apps and Power Automate with Power BI, including approval workflows, issue intake forms, and automated data refresh notifications.
- Developed reusable SQL transformation logic in Synapse and Data Bricks to optimize ELT workflows.
- Set up and maintained Azure Cosmos DB integration within Azure Data Bricks to enable scalable, low-latency data storage and retrieval.
- Worked with HR datasets, including Workday HCM extracts, to define and deliver governed workforce KPIs such as headcount, attrition, and organizational metrics for HR and Finance stakeholders.
- Documented KPI definitions and dataset lineage to improve trust, usability, and consistency of enterprise reporting.
- Leveraged Snowflake Time Travel to validate data, perform historical comparisons, and ensure data integrity and recovery across PostgreSQL and cloud warehouses.
- Executed advanced SQL queries on Snowflake virtual warehouses and collaborated with data engineering to align datasets with Power BI semantic models, ensuring accurate KPIs and trusted dashboards
- Managed SSRS report subscriptions and configured automated data refresh schedules in Power BI, guaranteeing timely and accurate report delivery.
- Partnered with Finance and Operations stakeholders to define standardized KPIs, document metric logic, and deliver Power BI dashboards supporting operational performance and decision-making.
- Collaborated with cross-functional teams to document marketing KPIs and metrics, enabling self-service analytics for business users
- Leveraged Power Apps features in Power BI reports to provide user-driven interactivity for select finance dashboards.
- Designed self-service Power BI dashboards integrating Direct Query and imported datasets, leveraging advanced formatting techniques and custom visual enhancements to improve usability and front-end presentation.
- Built dashboards analyzing customer acquisition funnels, retention cohorts, and campaign performance, enabling optimization of spend and ROI.
- Collaborated with data architects to design integration workflows and implement efficient data movement within the Data Bricks Synapse data warehouse architecture.

Store force, Toronto, ON

Role: BI Developer

Jan 2024 – Jan 2025

Responsibilities:

- Built automated pipelines to ingest sales data from retail systems (Salesforce CRM) and web platforms, modeling a unified Star Schema in Power BI to track real-time store performance and digital sales KPIs.
- Optimized Power BI data models and developed reusable report templates, improving performance and standardizing reporting across business units.
- Pipeline Automation: Migrated legacy reporting to Azure Data Factory and Databricks, streamlining data connections and transformation workflows to handle high-volume retail transaction data.
- Worked with Fin team to obtain Oracle EBS monthly data extracts and built, transformed, and delivered accurate sales data and operational reporting dashboards for month-end and year-end activities
- Retention & Conversion Analytics: Built dashboards analyzing customer engagement, retention, and conversion trends, applying UI/UX best practices and interactive Power BI design to deliver clear, story-driven sales insights.
- Advanced Tooling (Power Platform): Used Dataverse and Power Apps to build interactive parameter inputs within Power BI, allowing leadership to explore what-if scenarios for promotional launches and sales forecasting.
- Governance & Documentation: Established data validation rules and metadata documentation across the Azure stack to ensure reporting accuracy and "single source of truth" consistency for executive stakeholders.
- Operational Automation: Automated month-end report snapshots and build alerts using Power Automate, significantly reducing manual effort and ensuring timely delivery to HR and Finance teams.

Bajaj Allianz General Insurance, Pune, IN

Role: Sr. BI Developer

Sep 2021 - Dec 2023

Responsibilities:

- Automated ITSM data monitoring and job failure alerts through Service Now, minimizing downtime and ensuring timely issue resolution.

- Worked with ERP-based datasets to support Finance team operational and audit reporting across periodic cycles.
- Implemented role-based access controls and encryption standards across Azure Data Factory and Data Lake to align with enterprise Data governance and compliance policies.
- Led L2 ITSM incident management for P1/P2 data and reporting issues, coordinating RCA with IT teams and tracking remediation to closure.
- Worked on creating Paginated Reports for stakeholders.
- Engineered dynamic ELT pipelines using ADF and applied strong SSIS expertise to support reliable migration and transformation of data from on-prem systems to Azure Data Lake (Gen 2)
- Developed reusable ADF templates and configured automated monitoring with Azure Logic Apps and Service Now to minimize downtime.
- Conducted customer and transactional data analysis to optimize retention and reporting, providing actionable insights that improved business performance and ROI.
- Designed and optimized OLAP cubes in SSAS with star and snowflake schemas for high-performance reporting.
- Implemented role-based access controls and encryption standards across Azure Data Factory and Data Lake, aligning with enterprise governance policies.
- Managed OLAP cube security by defining roles and permissions to control access to sensitive data within the cubes.
- Optimized ADF Pipelines with tuning settings like concurrency and fault tolerance to improve performance and data flow.
- Integrated Service Now with BI reporting tools to automate the generation and tracking of reports. Configured SLA-based alerts to notify stakeholders when reports were delayed, ensuring timely action and resolution of issues.
- Migrated on-premise data warehouse to Azure Synapse Analytics using ADF.

Federal Bank, Mumbai, IN

Role: BI Developer

Mar 2018 - Sep 2021

Responsibilities:

- Designed and implemented a Data warehouse, managing the full development lifecycle to ensure data integrity.
- Developed complex SSIS packages to load data into fact and dimension tables using Slowly Changing Dimensions
- Engineered governed semantic BI layers with standardized KPIs, reusable datasets, and row-level security to support enterprise self-service analytics.
- Created comprehensive SSRS reports with advanced features (drill-down, drill-through, and parameterized options).
- Implemented Row-Level Security in BI and leveraged SNow for automated report generation and incident tracking.
- Developed dashboards to track customer behavior, trends, and operational KPIs, delivering insights that supported stakeholder decisions and workflow efficiency.
- Utilized Service Now for automated report generation and incident tracking, ensuring timely delivery and SLA compliance. Implemented custom reports with notification triggers for failures, enabling automatic ticket creation and resolution workflows.
- Worked on creating Paginated Reports as per Business, supporting Oracle BI Publisher for enterprise reports.
- Applied Power Apps functionality on specific report to enable scenario analysis and dynamic, user-driven reporting.
- Collaborated with SAP data teams to design and develop BI reports and dashboards, applying data modeling concepts similar to SAP BW for KPI tracking and reporting accuracy.
- Participated in Change Advisory Board (CAB) meetings, ensuring all proposed changes were documented, reviewed, and properly implemented with updated reference materials.

Technical Skills:

- **Primary Skills:** MSBI, T-SQL, Azure, PL/SQL, AW SQL
- **Azure Cloud Services:** SQL Database, SQL Data Warehouse, AWS, Data Lake Store, Blob Storage, Data Factory, Data Bricks, DevOps, Virtual Machines, Azure Monitor, Pipelines
- **ETL, Reporting & Visualization Tools:** SSIS, Azure Data Factory, SSRS, Power BI
- **Databases:** SQL Server versions 2008R2 to 2017, Oracle versions 12c, 11g, 10g
- **Languages:** T-SQL, PL/SQL, JSON, C#.Net, Python, Spark SQL, PowerShell, DAX
- **Analytical Tools:** SSAS, Power BI, Azure Data bricks
- **Development Tools:** Visual Studio versions 2008 to 2017, Data Tools, Toad, SQL, SQL Developer, SQL Loader
- **Operating Systems:** Windows Server versions 2008, 2012, UNIX, Windows 7, 8, 10
- **Service Management Tools:** JIRA, Service Now.
